

# THE KORA WORKSHOP

## Standard Nylon Strings - Silaba Tuning in F.

Adjusted to a major scale, which is slightly different to true Silaba. The difference is in the exact intervals between the notes of the scale, and many people would have trouble noticing .

The colour coding is only used to help identify the string to use in each position; all strings provided are clear. We discourage anyone from trying to use colour strings, ultimately it will seriously hinder not help.

*Major Scale in F (so the Bs are flat)*
